

## Levels of Credit Card Data

When it comes to processing business-to-business (B2B) transactions, there are processing fee discounts available when additional data is included with the payment request. To achieve these discounts, it is necessary to capture and convey this data.

Sync offers automated solutions to optimize the capturing of this data, making it easy to save money on applicable transactions. Each level represents an increasing number of details provided in a transaction.

### Level 1 (Default)

- Card number and expiration date
- Cardholder name
- Transaction amount
- Date and time of the transaction

### Level 2 Data

- Level 1 data plus:
- Merchant Tax ID or Business Identification Number
  - Customer code
  - Sales tax amount
  - Invoice or purchase order number
  - Address verification

### Level 3 Data

- Levels 1 & 2 data plus:
- Shipping information
  - Order number
  - Item details
